JOSTA® PPSystem - a step ahead in bicycle parking

JOSTA® introduces the Push Parking System -PPSystem- which optimises cycle parking facilities in new ways.

The PPSystem offers great space savings as well as a secure and economic method of cycle parking (push & slide).

It is a new and unique system making bicycle parking much easier:

the bicycles push easily into the parking slots and are secured by the stabilizing bars.

Each wheel and the frame are able to be locked in place for added security.

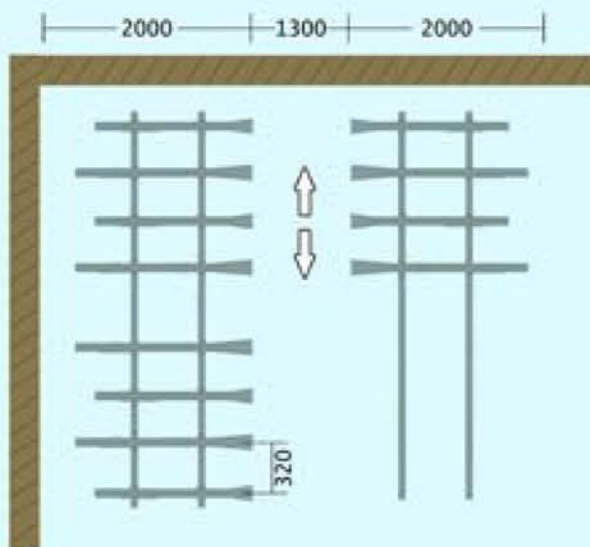

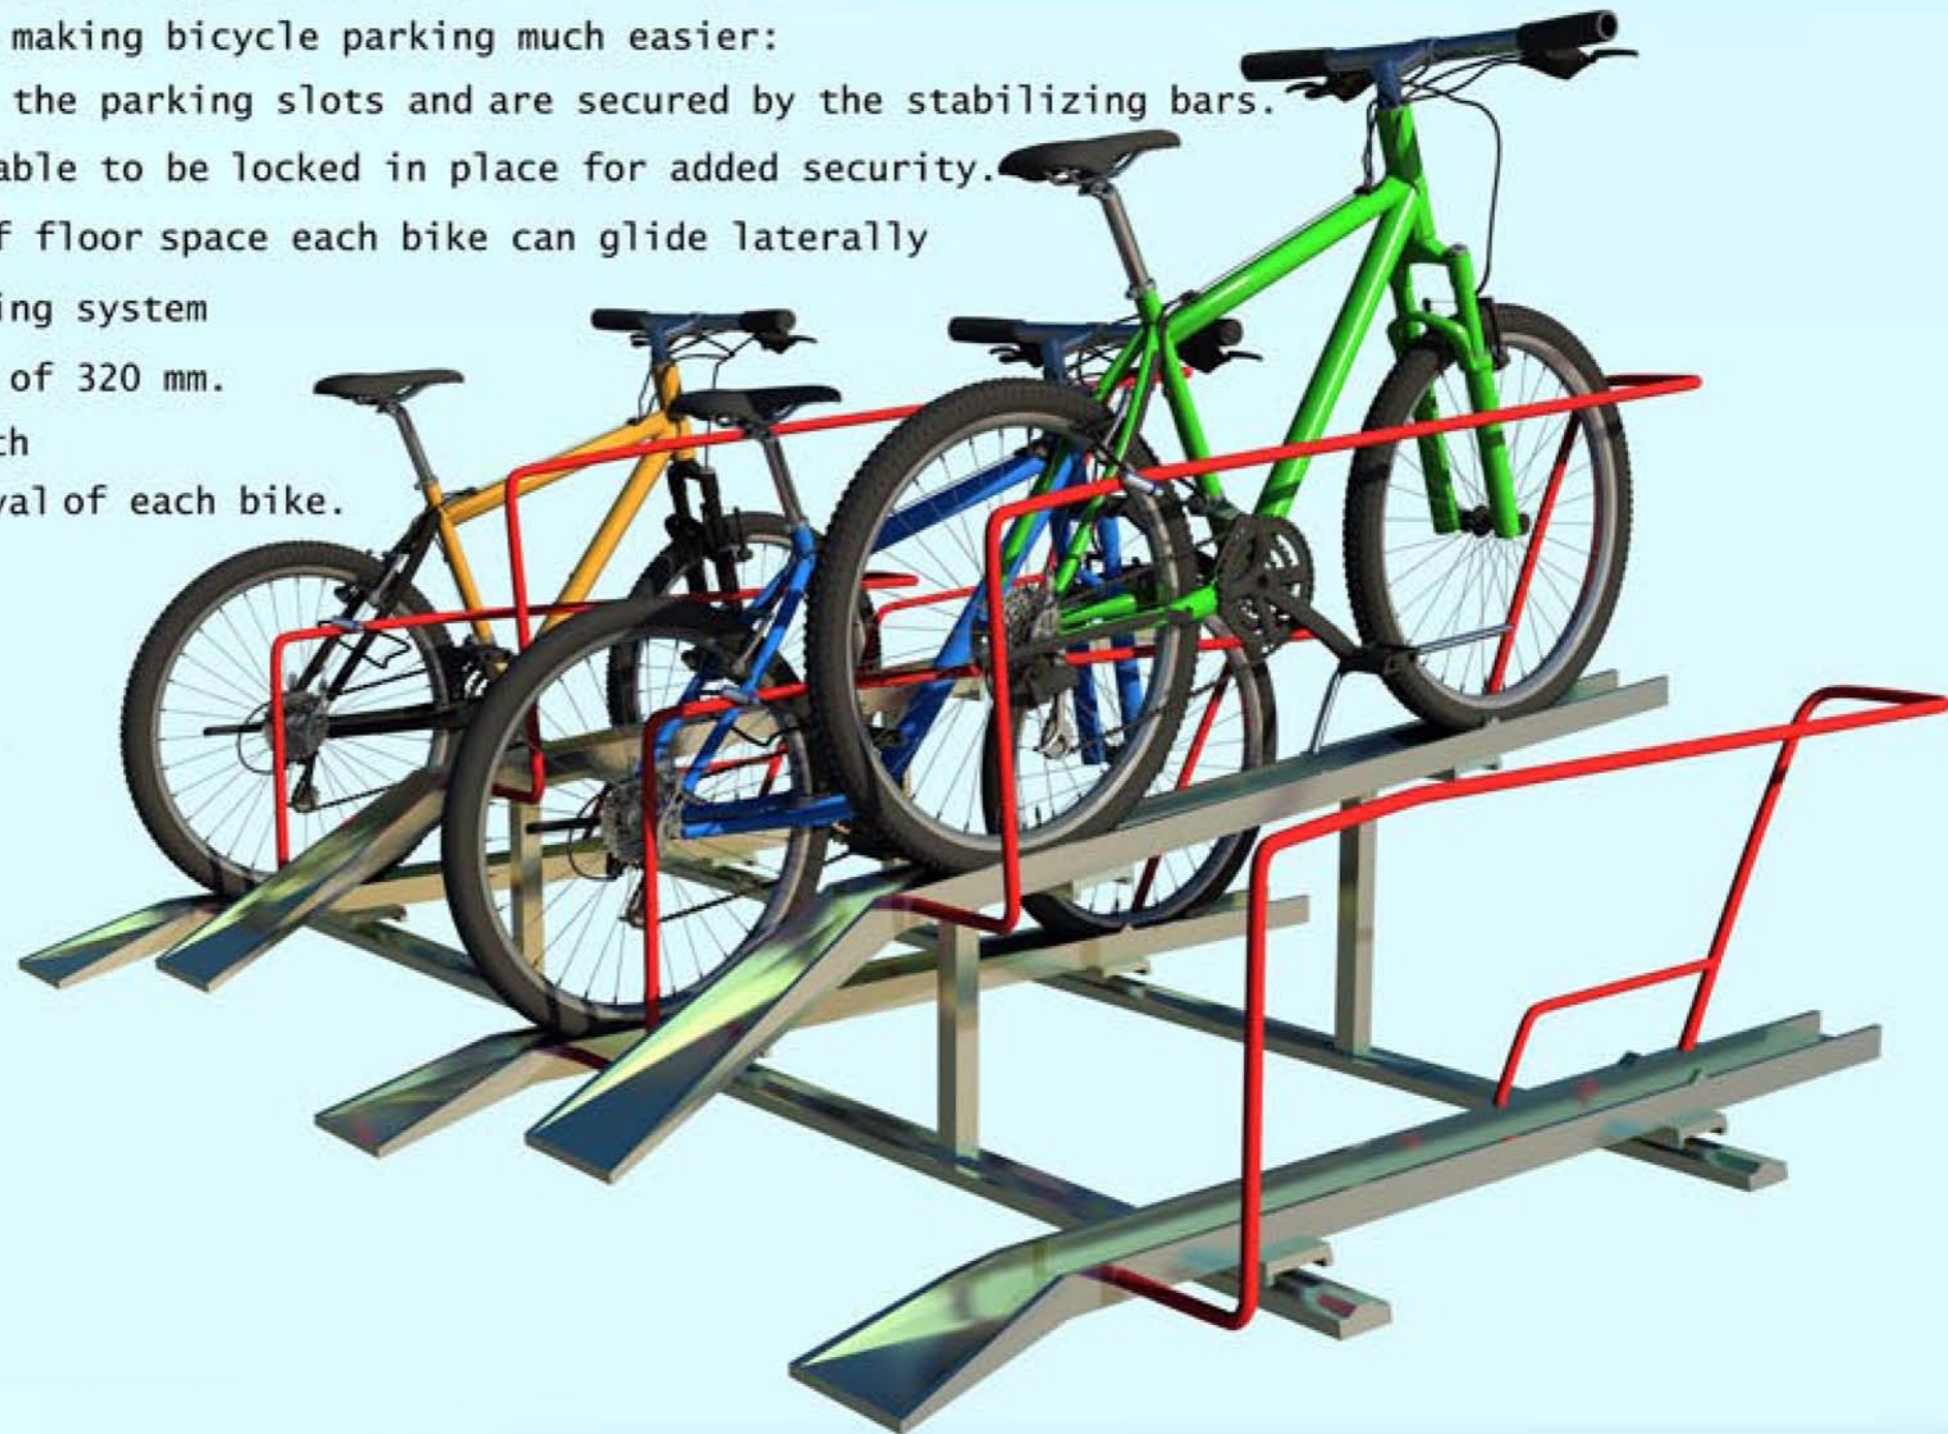

To optimize the utilization of floor space each bike can glide laterally

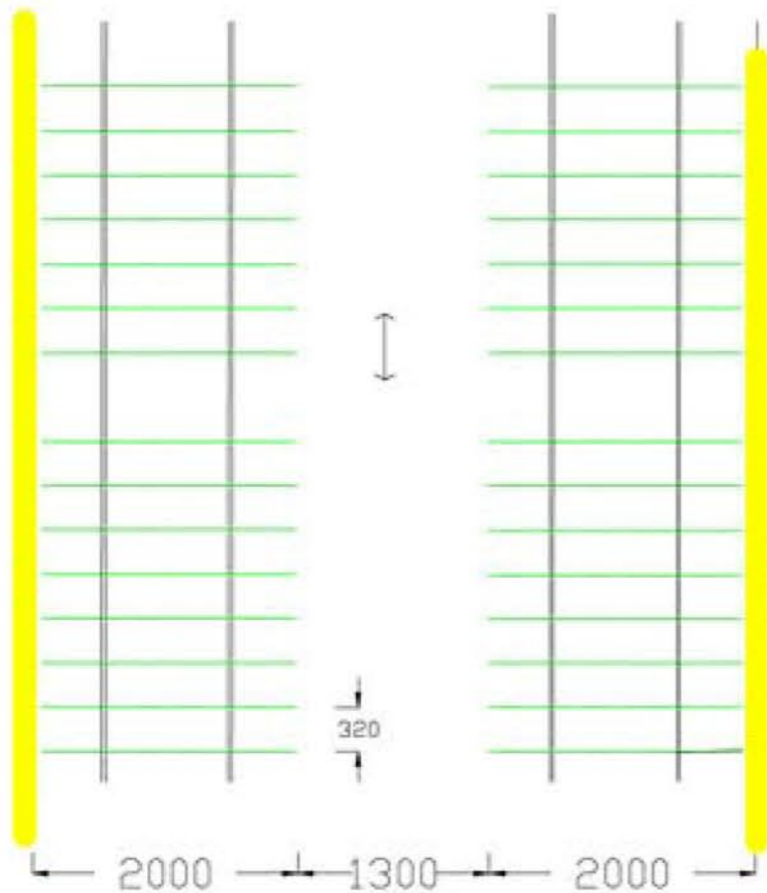

on tracks like a mobile shelving system

to very close centre spacings of 320 mm.

The lateral operation is smooth

and easy for parking and removal of each bike.
